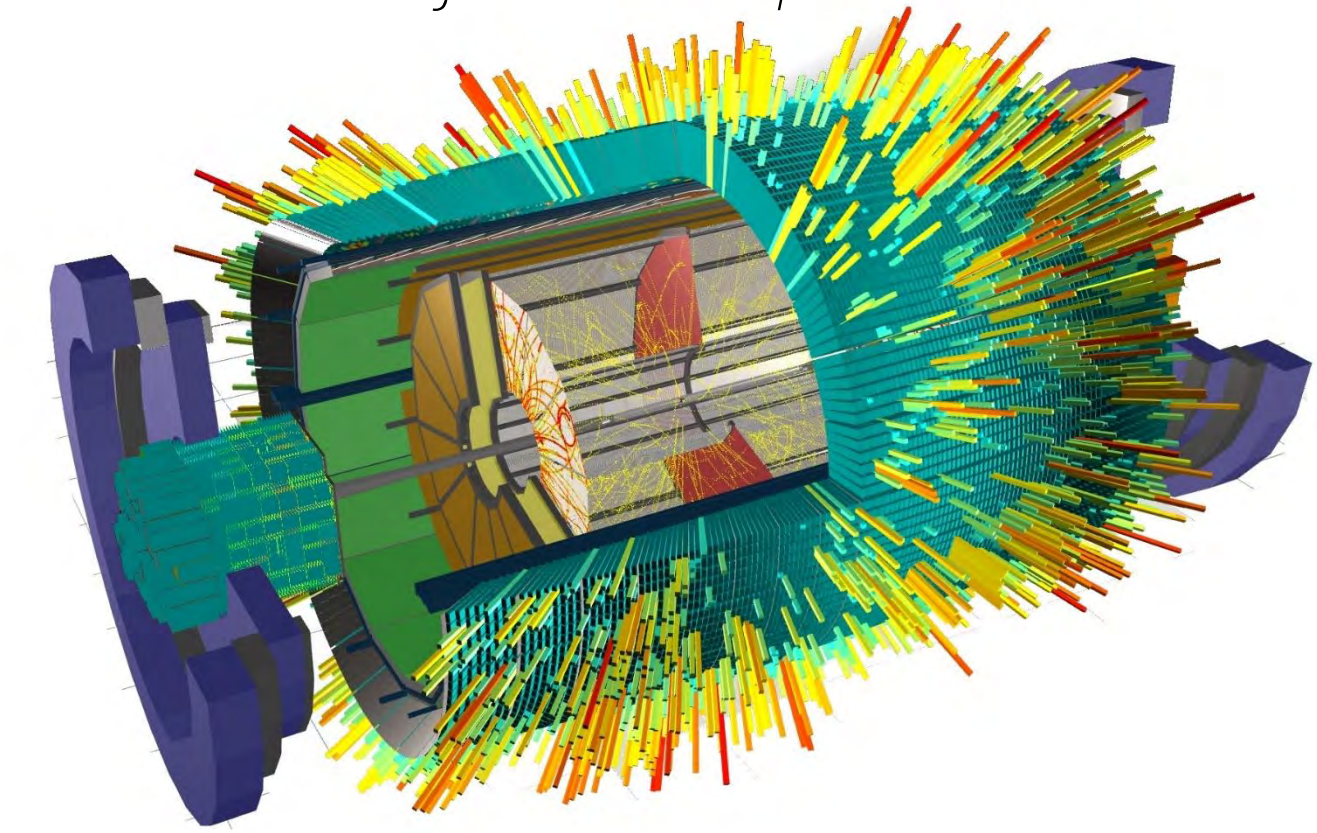
A Common Tracking Software (ACTS) Implementation in MPDRoot

HNATIC Slavomir

MPD Software Development Team



OUTLINE

- Quick Recap
- Software Development summary
- ACTS framework
- Continuous migration scope
- ACTS Vertexing in MPDRoot
- Track selection
- Preliminary results
- Full ACTS Vertexing suite
- Remaining tasks, future perspectives

QUICK RECAP (April 2024)

NICADIST
- separate build system
- dependencies handling

CVMFS
- software distribution
- unified environment

Project Management & Support/User Interaction

GITLAB
- codebase
- CI
- testing

SUPPORT
- helpdesk
- telegram channel

WEBSITE
- howtos
- docs
- general info

R & D

MPDRoot

ANALYSIS | SIMULATION | RECONSTRUCTION

Mass Production

PWG REQUESTS HANDLING | DIRAC INTERWARE

Computing Infrastructure
(MICC & friends)
- supercomputer
- clusters
- storage systems

MPD assembly

TPC installation: March/May 2025

ONLINE EVENT DISPLAY
- experiment visualization
- slow control

DATA STORAGE & RETRIEVAL

DETECTOR CALIBRATION
- alignment
- noise level
- digitalization delay

RELEASES SINCE APRIL 2024

MOST IMPORTANT CHANGES

New features

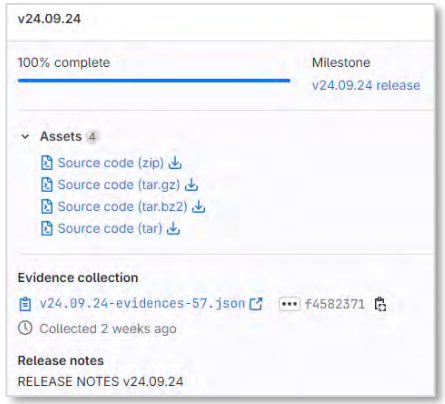
- Analysis updates (physicists)
- LUSI detector
- Global QA histograms
- ACTS vertexing
- ACTS v36 port

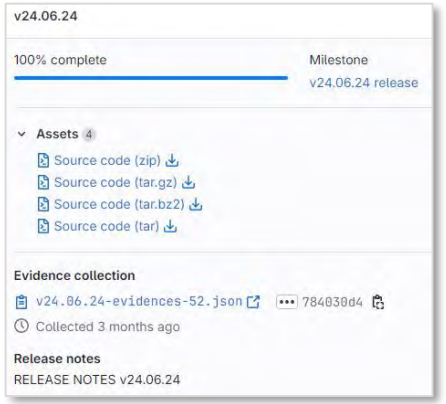
Latest dependencies

- ROOT …… 6.32.06
- GCC ……13.2.0
- Boost …….1.83.0
- FairRoot …. 18.6.10
- GEANT4 …. 11.2.1
- Python …… 3.12.4
- GSL ……2.8
- Fedora 40, Ubuntu 24.04 LTS

DETAILED INFO in RELEASE NOTES

git.jinr.ru/nica/mpdroot/-/releases





Important fixes

- GEANT4 working with ACTS
- Nonzero Z vertex working with ACTS

ACTS TRACKER

CORE CONCEPTS

- Modern C++
- Thread-safe design
- Experiment independent core component and algorithmic implementations
- Virtual inheritance (run time polymorphism) minimized, compile time polymorphism used (templates)
- Customizable configuration struct
- Abstraction from experimental details (generic EDM, geometry)
- Transparent handling of experiment context
- Algorithmic modules – stateless engines

```
// Example ACTS algorithm
class Algorithm {
public:
  // Nested configuration struct
  struct Config {
    int configVariableA = 0;
    double configVariableB = 0.;
  };

  // Nested state struct
  struct State
  {
    int cachedValue = 0;
  };

  // Construct the algorithm from its configuration
  Algorithm(const Config& cfg);

  // 'const' method requiring or modifying cached information
  void doSomething(State& state) const;

private:
  // The configuration object
  Config m_cfg;
};
```

CONTINUOUS MIGRATION SCOPE

Example: ACTS v36.0.0 (July 2024) → v37.0.0 (October 2024)

https://github.com/acts-project/acts/releases (changelogs)

🚀 Features

- Memory dense `MeasurementContainer` for Examples (#3528) by @andiwand
- Detray geometry/material conversion in examples (#3579) by @asalzburger
- Allow user to supply root branch to Core CKF (#3534) by @andiwand
- Add counters to propagation summary (#3602) by @asalzburger
- Generalized conversion of FullPhysicalVolume (#3585) by @Berggren-Jonas
- Broadcast dataflow check to python (#3624) by @asalzburger
- Improvements to multitrajectory iterators (#3619) by @stephenswat
- *(util)* Add GraphViz helper types (#3635) by @paulgessinger
- Allow digitization to save cells (#3626) by @stephenswat
- Add Detray surface grid converter (#3608) by @asalzburger
- Add measurement emplace functions (#3627) by @stephenswat
- Added new SVG functionality (#3649) by @asalzburger
- 🚨 **BREAKING**: Track-EDM like implementation for the space points, to be used in the se
- Allow detray sterile/non-sterile propagation (#3652) by @asalzburger
- Support seed from N space points (#3645) by @CarloVarni
- Enable geant4 propagation xcheck (#3657) by @asalzburger
- Adding possibility to read flat surface container (#3668) by @asalzburger
- *(geo)* TrackingVolume gets portal storage (#3673) by @paulgessinger
- *(geo)* TrackingVolume gets surface storage (#3675) by @paulgessinger
- Allow volume constrain for propagation (#3470) by @andiwand
- *(geo)* Extent designated initialization (#3680) by @paulgessinger
- 🚨 **BREAKING**: (fix + chore) streamline nSegments usage (#3419) by @asalzburger
- Allow Style setting for IndexedSurfaceGrid in Svg (#3686) by @asalzburger
- Add test for space point edm (#3690) by @CarloVarni
- Gen 3 portal shells (#3564) by @paulgessinger
- 🚨 **BREAKING**: Add a radius bin to the grid (#3662) by @CarloVarni
- Add support for Timed Clusterization (#3654) by @CarloVarni
- New material comparison script (#3389) by @asalzburger
- Make vertexing in Examples more configurable (#3406) by @andiwand
- Implement modified Bryson–Frazier (mBF) smoother as alternative to `GainMatrixSmoother` (
- Add `TrackProxy::shallowCopy` (#3428) by @paulgessinger
- `TruthVertexSeeder` for Examples (#3364) by @andiwand
- Adding sympy stepper to python bindings (#3433) by @asalzburger
- Reverse track finding for Examples (#3200) by @andiwand
- Prototracks-to-Tracks converter & refactor (#3357) by @benjaminhuth
- Use track particle double matching by default in Examples (#3409) by @andiwand
- Splitting fill and update function (#3465) by @asalzburger
- Add CMake presets (#3135) by @andiwand
- Decouple SurfaceAccessor from source link implementations (#3445) by @ssdetlab
- *(util)* Grid type-erased output and comparisons (#3469) by @paulgessinger
- Variable size measurement for Examples (#3107) by @andiwand
- Change propagation algorithm to particle gun input (#3462) by @asalzburger
- *(geometry)* `RegularSurface` gets direction-less `isOnSurface` (#3500) by @paulgessinger
- Refactor and generalize propagation validation (#3514) by @asalzburger
- Add GeoModel to G4 detector construction helper (#3530) by @benjaminhuth
- Bind some Gen1 geometry building functionality to python (#3448) by @benjaminhuth
- Telescope style seeding (#3300) by @ssdetlab
- GeoModelDetectorObjectFactory for flexible conversion of GeoModel objects to Acts Surfa
  @Berggren-Jonas
- *(geo)* `Surface::isOnSurface` gets tolerance parameter (#3544) by @paulgessinger
- Max chi2 for outliers in Core `MeasurementSelector` (#3475) by @andiwand
- *(geo)* Add name setter and move constructor to `TrackingVolume` (#3542) by @paulgessing
- Add displaced vertex generator (#3446) by @AichaMattouhi
- Renavigation for Gen1 (#3437) by @andiwand
- *(geo)* Gen3 portal links (#3531) by @paulgessinger
- Add B-field accessors to Python bindings (#3554) by @stephenswat
- Detray material conversion (#3546) by @asalzburger
- Add covfie magnetic field plugin (#3479) by @stephenswat
- Gen3 geometry Portals (#3501) by @paulgessinger
- Adding unit tests for `DetrayGeometryConverter` and `DetrayMaterialConverter` (#3572) b
- Introduce navigation stream (#3538) by @asalzburger
- Hashing seeding algorithm (#3148) by @CouthuresJeremy
- *(gx2f)* Material effects - multiple scattering (#3292) by @AJPfleger
- Allow Core CKF to skip the start surface (#3535) by @andiwand
- GeoModel conversion for TGC, sTGC and MicroMega (#3540) by @Berggren-Jonas

CONTINUOUS MIGRATION SCOPE

Example: ACTS v36.0.0 (July 2024) → v37.0.0 (October 2024)

https://github.com/acts-project/acts/releases (changelogs)

Refactor

- Write smoothed states in GX2F (#3584) by @andiwand
- 🚨 **BREAKING**: Remove `Utilities/detail/Subspace.hpp` (#3589) by @andiwand
- Rework tracklet handling in Examples track finding (#3587) by @andiwand
- 🚨 **BREAKING**: Template algorithms on track container frontend `TrackContainer` (#3193) by @andiwand
- 🚨 **BREAKING**: Remove `EventData/TrackHelpers.hpp` (#3588) by @andiwand
- Write unbiased states only for smoothed in `RootTrackStatesWriter` (#3561) by @andiwand
- 🚨 **BREAKING**: Remove deprecated API (#3591) by @andiwand
- Volume holds bounds as mutable (#3595) by @paulgessinger
- 🚨 **BREAKING**: Path handling to use `std::filesystem` (#3308) by @AJPfleger
- 🚨 **BREAKING**: Replace `EigenStepper` extension list with single extension (#2865) by @andiwand
- Replace `Acts::min_max` with `std::ranges::minmax_element` (#3601) by @AJPfleger
- 🚨 **BREAKING**: Rename `EigenStepper` dense extension (#3603) by @andiwand
- Update `to_array` (#3600) by @AJPfleger
- Modernise GeometryHierarchyMap (#3594) by @AJPfleger
- Add C++23 `std::ranges::contains` place holder (#3598) by @AJPfleger
- Changed the GeoModelToDetectorVolume to be able to return Acts::Volumes (#3576) by @Berggren-Jonas
- Use `std::ranges::sort` and `reverse` (#3596) by @AJPfleger
- 🚨 **BREAKING**: `VolumeBounds` becomes a scoped enum (#3513) by @paulgessinger
- Make `ViewConfig` usable with designated initializers (#3613) by @paulgessinger
- TrackingGeometry interface cleanup (#3612) by @paulgessinger
- Improved Python bindings for algebra types (#3611) by @paulgessinger
- Modified from_json in AmbiguityConfigJson for easier implementation in Athena (#3628) by @Ragansu
- Visualization3D location and API (#3622) by @paulgessinger
- *(geo)* Portal(Link)+Surface verbosity reduction (#3636) by @paulgessinger
- Reduce abuse of auto in mbf smoother (#3630) by @CarloVarni
- 🚨 **BREAKING**: SourceLink setting only via rvalue reference (#3488) by @paulgessinger
- Remove Sequencer dataflow override (#3625) by @paulgessinger
- 🚨 **BREAKING**: Fuse `Actor` and `Aborter` (#3573) by @andiwand
- 🚨 **BREAKING**: Converge to naming `sourceLink` (#3647) by @AJPfleger
- Remove MPL library (#3642) by @stephenswat
- 🚨 **BREAKING**: Return all track states from Core CKF (#3391) by @andiwand
- Remove redundant `operator!=`, introduce `operator<=>` (#3660) by @AJPfleger
- Remove `inline` from `constexpr` functions for clarity (#3659) by @AJPfleger
- Use `contains` for maps and sets (#3670) by @AJPfleger
- Modernise type traits (#3655) by @AJPfleger
- 🚨 **BREAKING**: Remove mean reduction from `MultiEigenStepperLoop` (#3671) by @andiwand
- Enhance `RootTrackParameterWriter` with residuals and pulls (#3666) by @andiwand
- Removed maxHits condition from ScoreBasedAmbiguitySolver (#3676) by @Ragansu
- Use `std::ranges:find`, `find_if`, `find_if_not` (#3614) by @AJPfleger
- Unify proxy iterator types (#3664) by @stephenswat
- Use `std::ranges::all_of`, `any_of`, `none_of` (#3593) by @AJPfleger
- 🚨 **BREAKING**: Do not use geometry extent during seeding (#3688) by @CarloVarni
- *(geo)* Add portals + surfaces to closeGeometry and visitSurfaces (#3678) by @paulgessinger
- Use std::atan2 instead of atan2f (#3695) by @CarloVarni
- *(gx2f)* Logic for multipleScattering option (no effect yet) (#3551) by @AJPfleger
- *(gx2f)* Remove outdated navigation abort conditions (#3552) by @AJPfleger
- Add C++20 track parameter, navigator, and stepper concepts (#3492) by @stephenswat
- Some refactorings around the G4 simulation (#3532) by @benjaminhuth
- Remove far limit hack from `Layer::compatibleSurfaces` (#3558) by @andiwand
- *(gx2f)* Early exit for `addToGx2fSums` (#3568) by @AJPfleger
- *(gx2f)* Early exit for the Actor (#3566) by @AJPfleger
- Rework G4 surface mapping to make it more robust (#3562) by @benjaminhuth
- Remove `calculateTrackQuantities` from Core CKF (#3567) by @andiwand
- Remove target volume estimation from `Navigator` (#3242) by @andiwand
- Remove remaining detection idiom usage (#3547) by @stephenswat
- Rework projector (#3529) by @andiwand
- Remove input source links from fitting algorithm (#3580) by @benjaminhuth
- Remove GX2F start volume checks (#3581) by @andiwand
- Rework projector (#3453) by @andiwand
- Conditional import & refactor in python scripts related to material mapping (#3518) by @benjar
- Remove `calculateTrackQuantities` from Core CKF (#3536) by @andiwand
- *(geo)* Use hidden friend for SourfaceBounds operators (#3543) by @paulgessinger
- Remove uses of `std::enable_if` (#3484) by @stephenswat
- Remove unnecessary `activeBranches.empty()` condition from Core CKF (#3541) by @andiwand
- RootMaterialDecorator as default for the ODD (#3415) by @benjaminhuth
- Rework `particles_selected` handling in Python Examples (#3423) by @andiwand
- Explicit `checkPathLength` and `isValid` intersection check (#3416) by @andiwand
- Single tree for `RootMeasurementWriter` (#3417) by @andiwand
- Remove `lastHierarchySurfaceReached` from `Navigator` (#3237) by @andiwand
- Resolve surfaces on initialization in `Navigator` (#3283) by @andiwand
- Remove `ProtoTrackTruthMatcher` in Examples (#3410) by @andiwand
- Disable copy&move for `TrackStateType` (#3451) by @andiwand
- Use Core CKF extrapolation after inwards extension in Examples (#3195) by @andiwand
- Physmon: enlarge etaRange for GX2F to match KF settings (#3412) by @AJPfleger
- Rework initial `qOverP` sigma in Examples (#3422) by @andiwand
- Split `GainMatrixUpdater` compilation (#3486) by @paulgessinger
- *(geometry)* Surface merging returns ordering (#3468) by @paulgessinger
- Remove dfelibs from dependencies (#3489) by @paulgessinger
- Change the definition of the rotation parameters (#2021) by @XiaocongAi
- Split `KalmanVertexUpdater` by dimension (#3503) by @paulgessinger
- Remove FPE mask #2284 (marked as #2348) (#3510) by @AJPfleger

CONTINUOUS MIGRATION SCOPE

Example: ACTS v36.0.0 (July 2024) → v37.0.0 (October 2024)

https://github.com/acts-project/acts/releases (changelogs)

Bug Fixes

- Allow resetting reference surface in Track EDM (#3586) by @andiwand
- 🚨 **BREAKING**: Make material validity checks and construction explicit (#3494) by @AJPfleger
- Remove pre-C++20 `std::identity` implementation (#3599) by @AJPfleger
- Stitch tracks correctly after second pass in Examples Track Finding (#3597) by @andiwand
- Adding GeomentryId to detray portals (#3606) by @asalzburger
- Remove `using namespace` in Detray plugin header (#3616) by @paulgessinger
- Reject outliers while trimming track states in Core CKF (#3644) by @andiwand
- Reject material states when no measurements are found yet in Core CKF (#3648) by @andiwand
- Added GeoShapeSubtraction converter for the failing conversion of RPCs to SensitiveSurface (#3592) by @Berggren-Jonas
- Kf+gsf: correct hole-tagging for edge case (#3637) by @AJPfleger
- Replace asctime with `strftime` for safer date formatting (#3658) by @AJPfleger
- *(gx2f)* New error `UsedUnreachableMeasurements` (#3653) by @AJPfleger
- Fix Warning messages (#3679) by @CarloVarni
- Correct initial `q/p` covariance term in `TrackParamsEstimationAlgorithm` in Examples (#3665) by @andiwand
- Fit iterator traits for ContainerIndexIterator (#3689) by @CarloVarni
- BinUtility was auto-convertible from Transform3 (#3691) by @paulgessinger
- Setting current surface fix for DetectorNavigator (#3401) by @asalzburger
- Fix and enable testing for RefittingAlgorithm (#3404) by @benjaminhuth
- Fix try all navigators after running with track finding (#3408) by @andiwand
- Add default value to ReadOnly in ScoreBasedAmbiguityResolution (#3418) by @Ragans
- `Vertex::setPosition(Vector3)` should only set position (#3421) by @andiwand
- Comparison error in DirectNavigator (#3424) by @benjaminhuth
- `VectorTrackContainer::removeTrack_impl` (#3427) by @andiwand
- *(sonar)* Move/forward, avoid slicing, noexcept destructors (#3396) by @paulgessinger
- Improve CKF error handling and fix path limit abortion (#3436) by @andiwand
- Correct handling of outliers and holes for track statistics (#3438) by @andiwand
- Handle holes after measurement selection in Core CKF (#3413) by @andiwand
- Fix proto layer range for straw surfaces (#3443) by @XiaocongAi
- Next round of RefittingAlgorithm fixes and hash checks (#3430) by @benjaminhuth
- Remove residual mentions of C++17 (#3455) by @stephenswat
- Select binning dimension in cuboid volume builder (#3463) by @AJPfleger
- *(gx2f)* Constrain update to initial volume (#3411) by @AJPfleger

Performance

- Use `SympyStepper` over `EigenStepper` in Examples (#3459) by @andiwand
- Optimize SourceLink creation, track state assignment (#3466) by @paulgessinger
- Drop `stateBuffer` from Core CKF (#3458) by @andiwand
- Improve Hough Transform performance (#3461) by @dimitra97
- Use sympy generated transport jacobians for sympy covariance transport (#3650) by @andiwand

…AND MUCH MORE !!!

Build, Testing, Documentation,
Miscellaneous changes (moving to C++ 23…)

How to run:

toolbox enter a9-nica-dev

module add mpddev ACTS/v36.0.0-1

build mpdroot's dev branch

runReco.C with ETpcTracking::ACTS

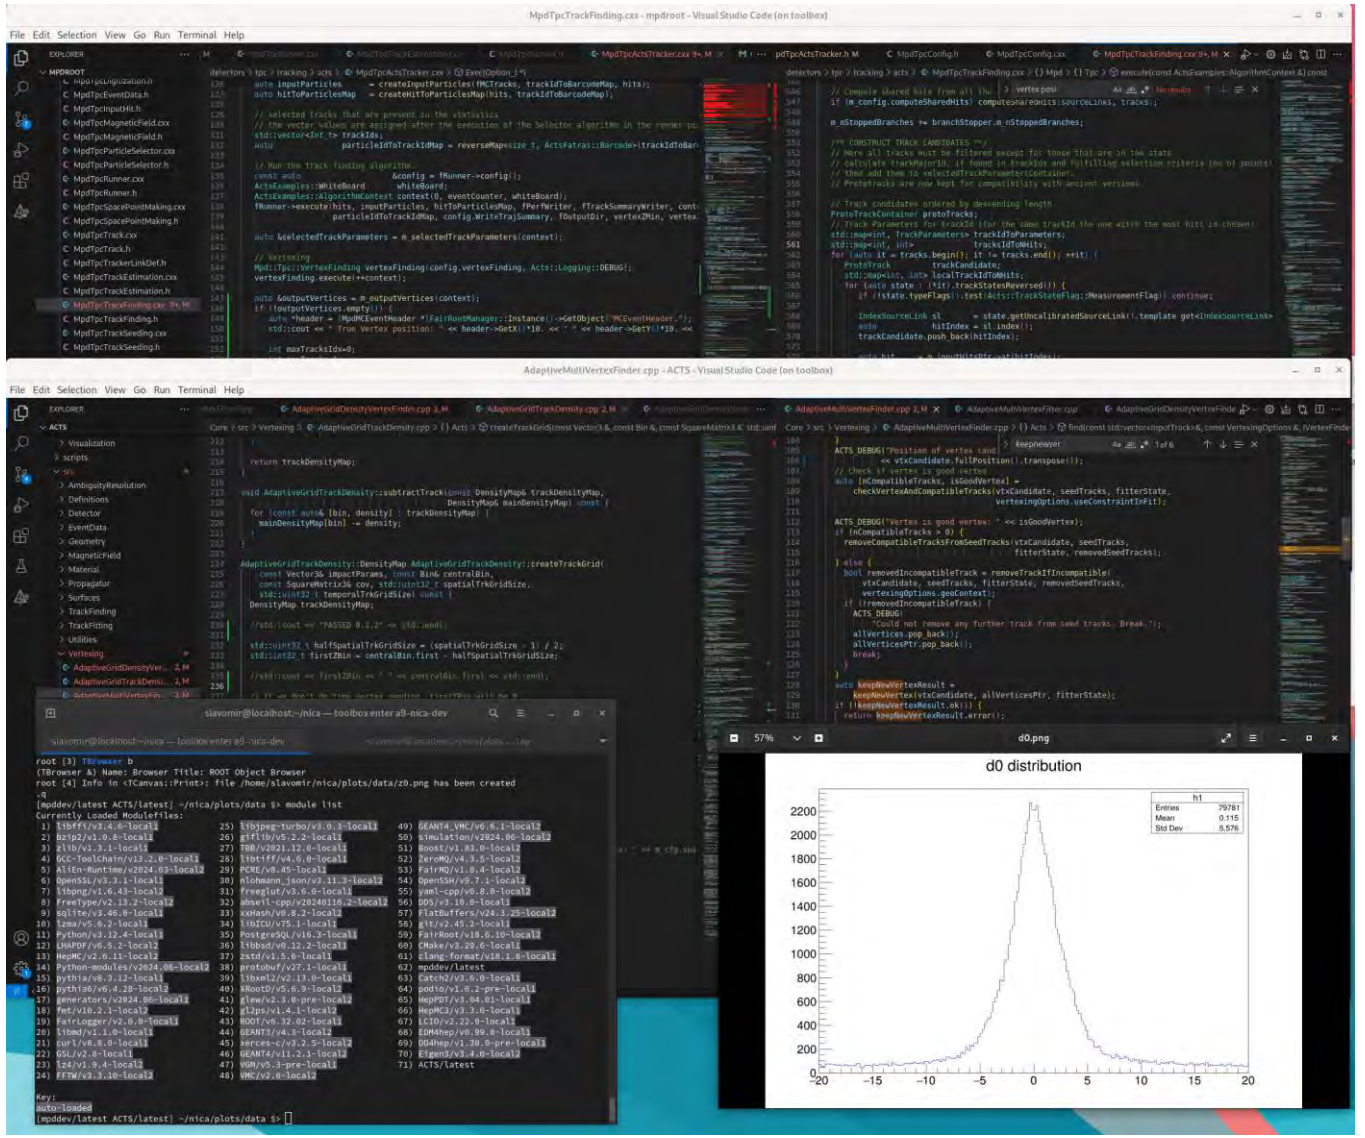
MIGRATION

Environment

- Virtual machine with full build (alibuild)
- 71 packages (currently)
- All source codes can be debugged (ACTS, FairRoot, ROOT,….)
- Recompilation intelligently done by alibuild
- Patching dependencies
- Developing features needed for MPD outside of MPDRoot

Effective development otherwise impossible

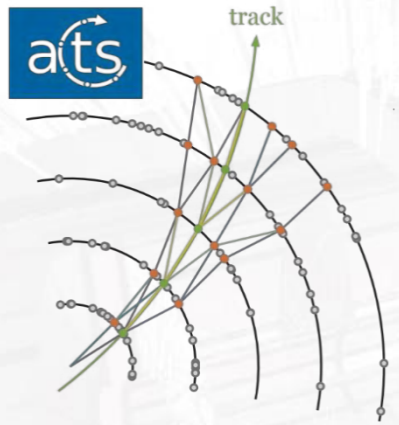
- Lack of documentation
- Overall complexity

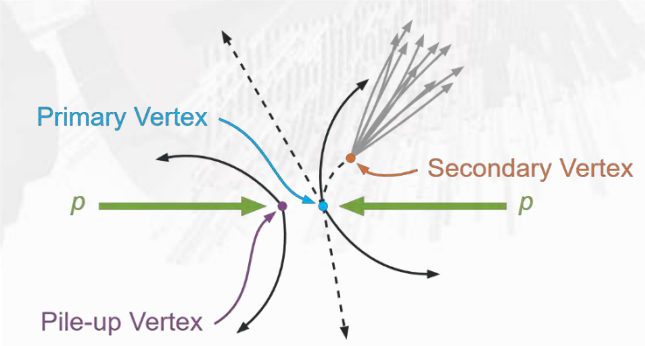


ACTS VERTEXING IN MPDROOT

TRACKING PIPELINE

- Virtual geometry
- Input Hits
- Projection
- Seeding
- Input KF parameters
- Track finding
- Selector
- Vertexing (primary)
- TOF Matching





VERTEXING

- Seed finding
- Vertex finding
- Vertex fitting

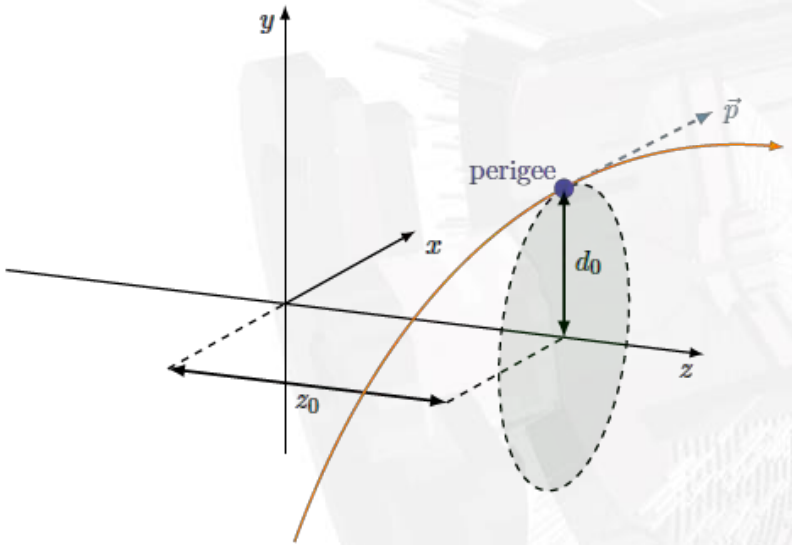
Algorithms

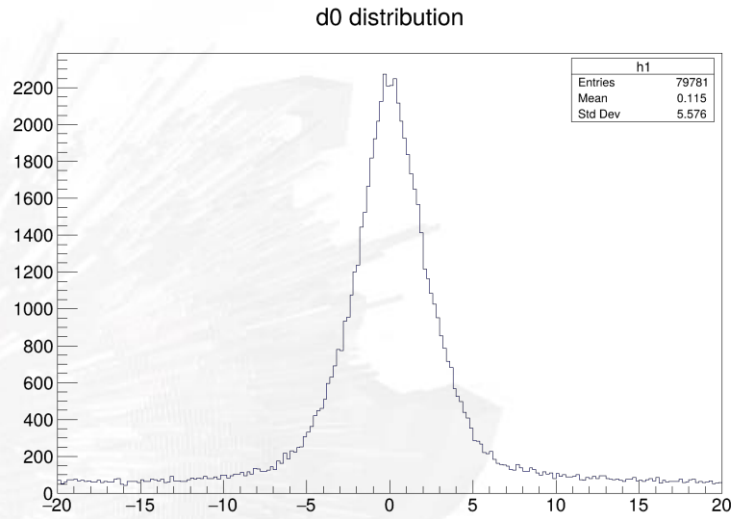
IVF: fitting-after-finding

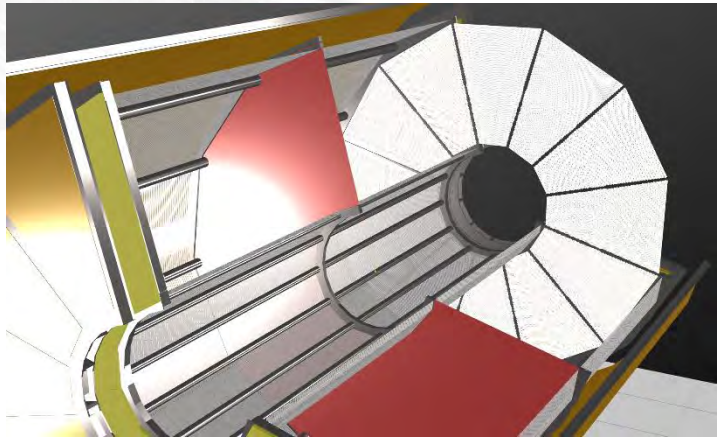
AMVF: finding-through-fitting

TRACK SELECTION

PERIGEE TRACK PARAMETRIZATION





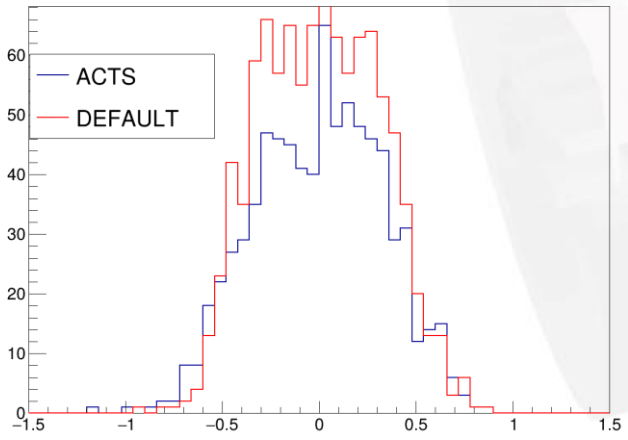


PRELIMINARY RESULTS

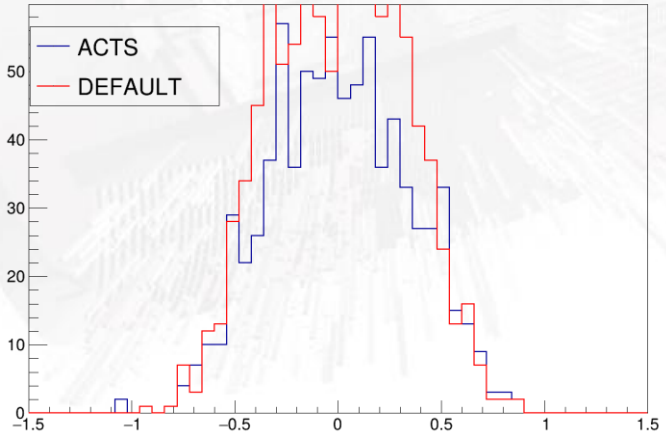
AMVF vs DEFAULT PRIMARY VERTEX FINDER

1000 events, BOX generator

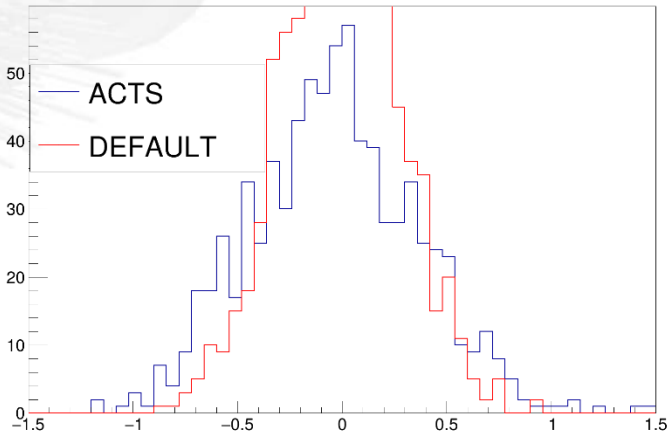
- |d_0| < 2mm, apart from that no tuning
- fine-tuning to be done by somebody junior (or TBD later)
- In some events seed not assigned (solvable)



$X\text{-}X_{true}$



$Y\text{-}Y_{true}$

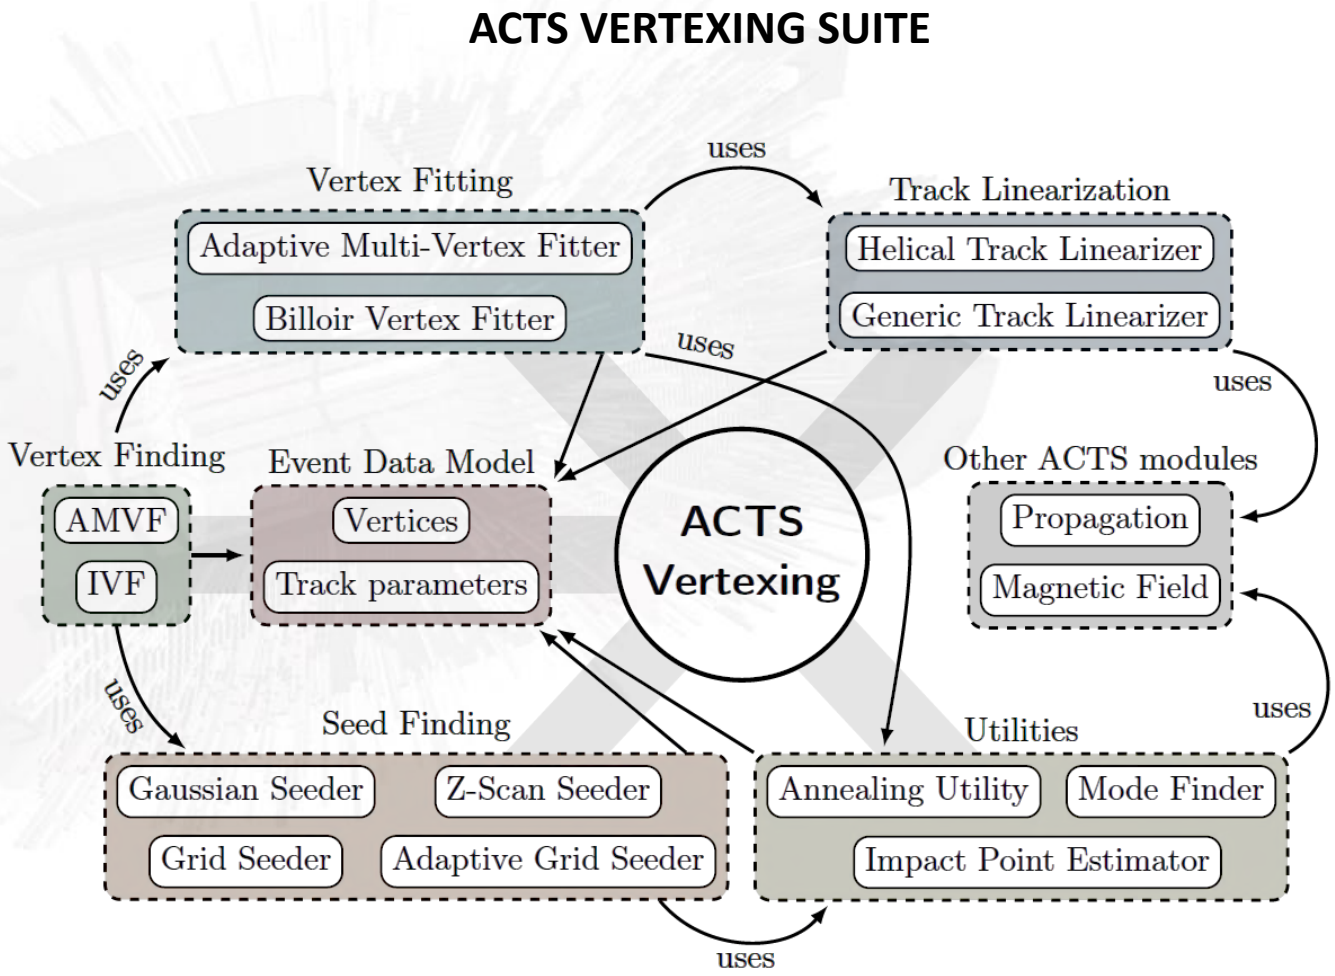


$Z\text{-}Z_{true}$

VERTEXING SUITE

- a lot of components
- too many parameters to tune, which can be time consuming
- documentation lacking

Way out: use virtual machine with full alibuild



FUTURE

ACTS

- TOF matching (finalize integration into global reco)
- Optimize virtual geometry
- Vertex Finder tuneup
- Optimization of Acts tracker configuration parameters (speed, efficiency)
- Refactoring, phase out obsolete API (prototracks, hit-particle matching…)
- Remove outdated statistics utils, move to native ACTS utilities
- Disconnected tracks

SOFTWARE DEVELOPMENT

- up to date with latest packages (Acts, ROOT, …)
- regular release schedule
- automated tests
- cleanup
- refactoring

CLUSTERING

- Improve accuracy level of Fast algorithm (edge cases, benchmarking)
- Integration of Wavelet algorithm

ESSENTIAL CRITERION – real experiment reusability (QA toolkit)

Thank You !
