

DSpace software platform for digital repository of publications

I. Filozova, G. Shestakova, A. Kondratyev, A. Bondyakov, T. Zaikina

XII Annual Conference of Young Scientists and Specialists Alushta 2023
June 4 -11

Institutional repository

Containing articles, preprints and other materials reflecting and promoting JINR research activities.

Store and provide effective access to JINR information resources.

Make scientific results available to all scientific and educational community.

To estimate the efficiency of the JINR scientific activity.

Part of scientific communication.

JINR Publications Repository

Software Platform Overview

Candidates for JINR Publications Repository

Characteristic	JDS-JOIN2 inside project	JDS-JOIN2 outside project	DSpace 7.4	INVENIO 3
Access policy management	+	+	+	+
Data import from popular identification systems: DOI, ISBN, identifiers arXiv, Medline, PubMed, INSPIRE	+	+/-	+	-
Multi-criteria search and viewing of digital resources of the repository by metadata and including full text	+	+	+	+
Collaboration authors entry (1000 or more)	+	+	?	+
Automatic duplicate tracking	+	+	?	?
Storage of OPEN ACCESS document	+	+	+	+
Control of entered Information	semi- automatic	semi- automatic	?	?
Open Source	+	+	+	+
Ready for implementation	+	+	+/-	-
Support	+	-	Big community	-
Further development	+	-	+	?
PIN integration	+	+	Looks promising	?
Updating vocabularies of persons and departments	+	+	+	?
Documentation	+/-	+/-	+	+/-
Modern engine	-	-	+	?
Good scalability	-	-	+	?

JINR Publications Repository Platforms

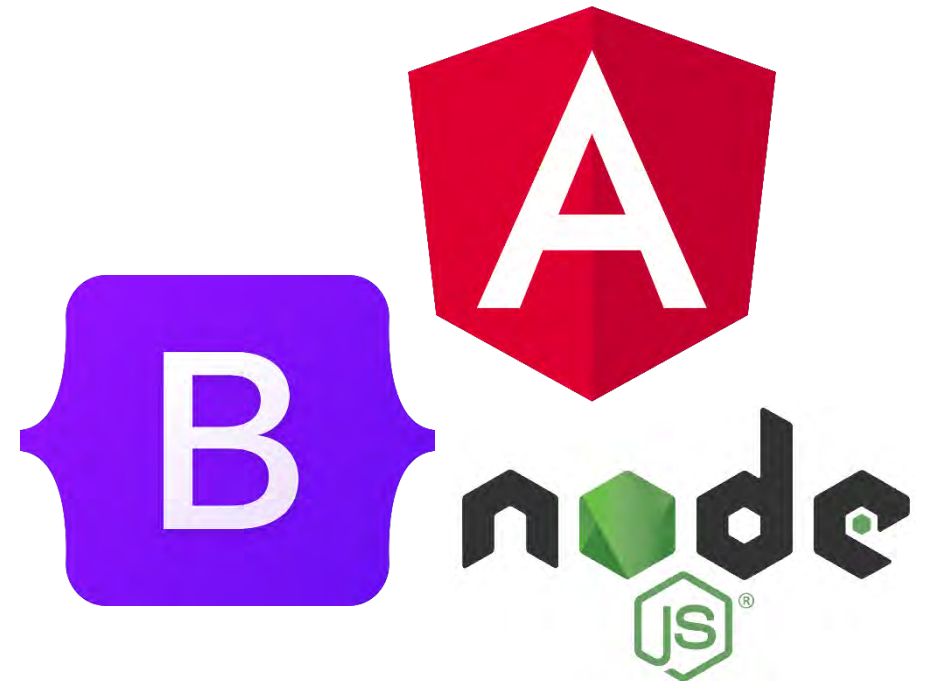

- ✓ Distributed system
- ✓ Good scalability
- ✓ Flexible backup system
- ✓ Flexible authorization system
- ✓ Good security
- ✓ Powerful and customizable UI
- ✓ Big community

User Interface

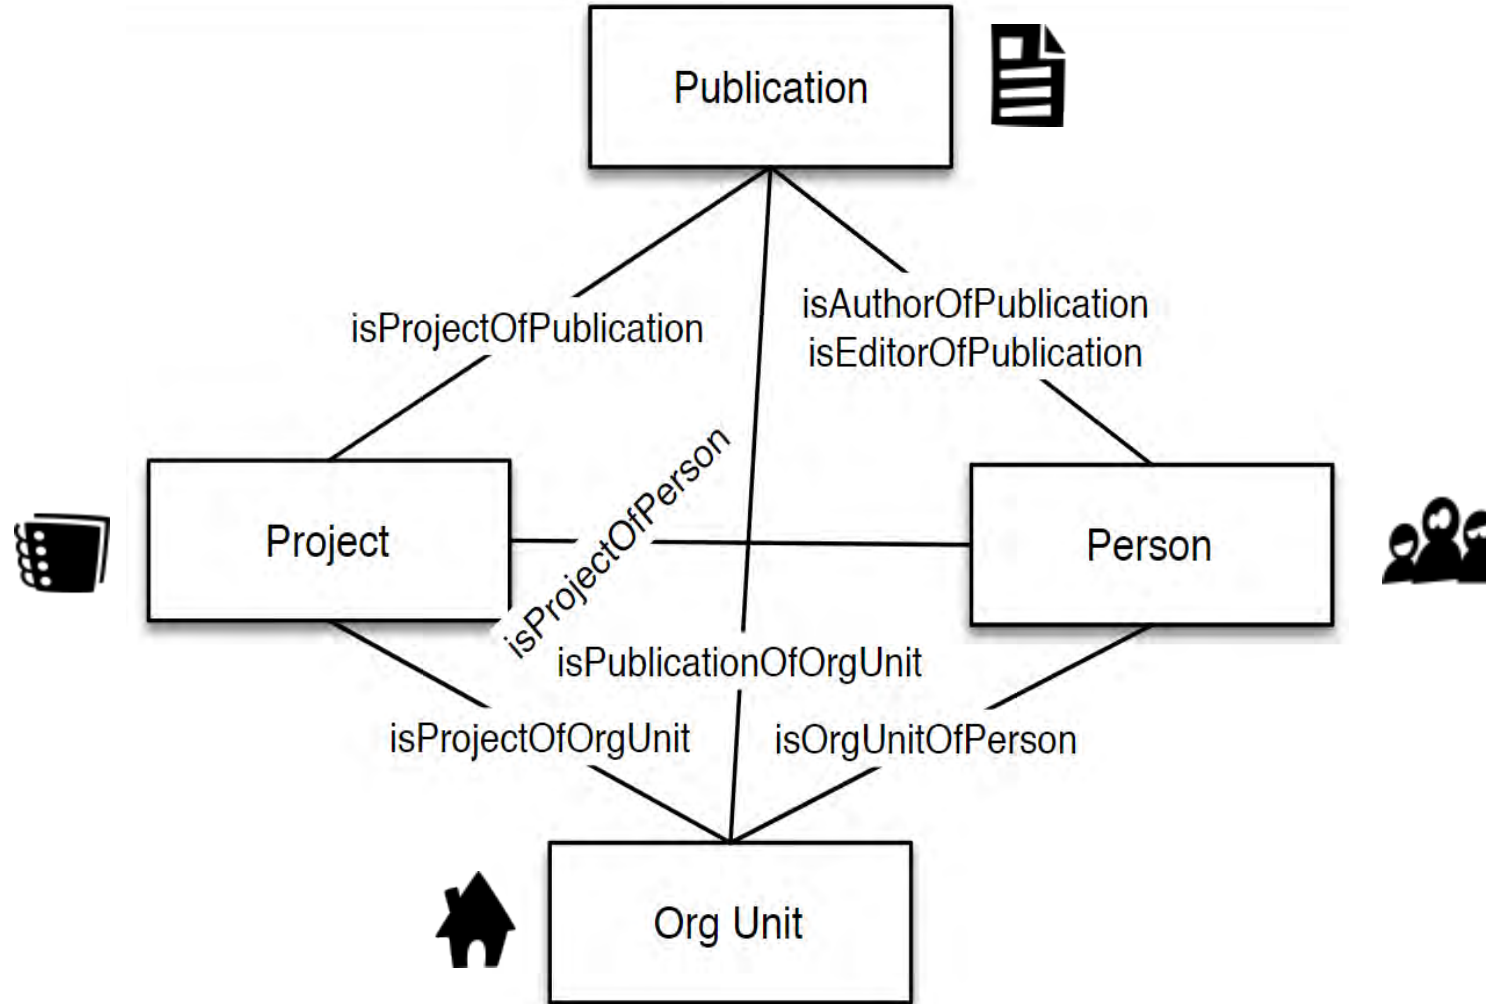

JINR Institutional Repository on the DSpace

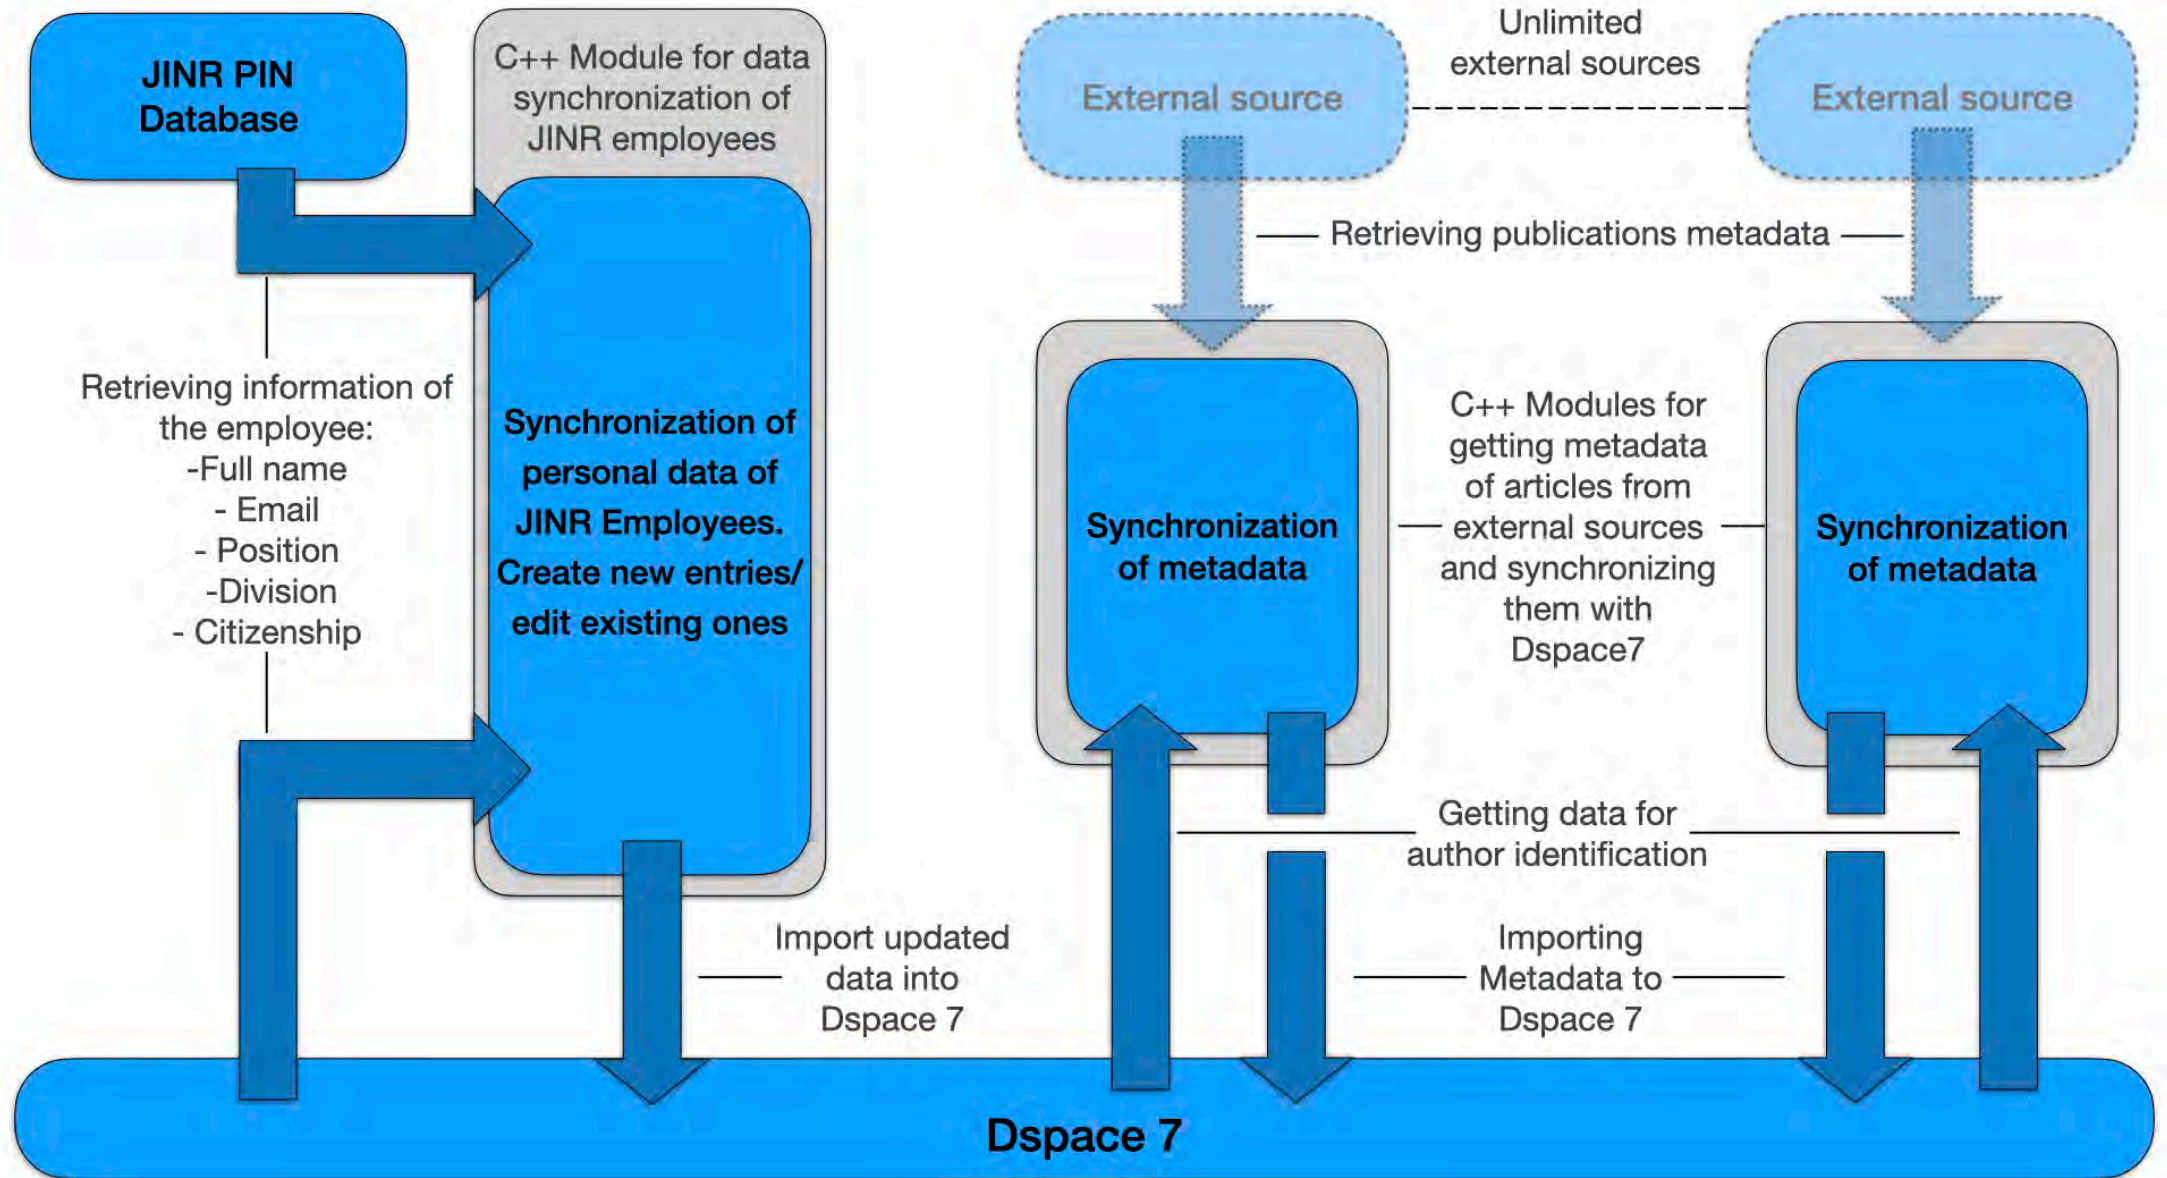

- Easily login via SSO
- Search and browse publications by authors, organizational units, topics, projects, and more...
- Submit your own publications
- Harvesting of publications from external sources

The screenshot shows the JINR Institutional Repository homepage. At the top left is the JINR logo and the word "Publications". To the right are search and login icons, with a red box around the "Log In" button and the text "login via SSO" below it. Below the navigation bar is a large banner image of a building with the text "JINR Repository" and "Repository for Publications and Scientific output of JINR employees". A list of features is shown: "Easily login via SSO", "Search and browse publications by authors, organizational units, topics, projects, and more.", and "Submit your own publications". Below this is a search bar with the text "Search the repository ..." and a "Search" button. Underneath is a section titled "Communities in repository" with the instruction "Select a community to browse its collections." and "Now showing 1 - 2 of 2". Two community links are shown: "JINR" and "User Submissions", both highlighted with red boxes. To the right of "JINR" is the text "Harvesting of publications from external sources" in red, and to the right of "User Submissions" is "Submit your own publications" in red. A small RSS icon is visible on the right side of the page.

Abstract

The High Luminosity phase of the LHC, which aims for a tenfold increase in the luminosity of proton-proton collisions is expected to start operation in eight years. An unprecedented scientific data volume at the multiexabyte scale will be delivered to particle physics experiments at CERN. This amount of data has to be stored and the corresponding technology must ensure fast and reliable data delivery for processing by the scientific community all over the world. The present LHC computing model will not be able to provide the required infrastructure growth even taking into account the expected hardware evolution. To address this challenge the Data Lake R&D project has been launched by the DOMA community in the fall of 2019. State-of-the-art data handling technologies are under active development, and their current status for the Russian Scientific Data Lake prototype is presented here.

This article presents the Geometry Information System (Geometry IS) developed in a configurable manner for use in all the NICA experiments. The general object model and the architecture of the Geometry Database (Geometry DB) are designed and described in detail. The information system contains Central (based on...
